

ELECTRONIC REEL LIFTING TROLLEY

The "ELECTRONIC REEL LIFTING TROLLEY", in addition to its high reliability and small dimensions, possesses all requirements needed for web handling and web feeding in rotary printing, flexographic, serigraphic, and cutting machines.

The MOSFET system allows the electronic recovery of energy guaranteeing approximately 120 hours per charge. An acoustic signal warns the operator when batteries reach low energy level. A wide range of construction variants allow to adapt the equipment lay-out to any specific application.

REEL LIFT CAR

UK

The “MANUAL REEL LIFT CAR”, besides its high reliability and small dimensions, possesses all requirements needed for web handling and web feeding in rotary printing, flexographic, serigraphic, and cutting machines.

Carrying capacity	Kg.	:	600
Total width	mm	:	610
Total length	mm	:	950
Total height	mm	:	1500
Wheel base	mm	:	535
Lifting vertical stroke	mm	:	880
Weight truck in running order	Kg.	:	100
Front rollers diam.	mm	:	86
Rear driving wheel diam.	mm	:	125
Truck steering	with rudder		
Type of carriage guide	by operator
